

The Simple Solution For Complex Conveying

Complex conveying requires an unconventional solution. The ICS is the missing piece.

Innovative Conveying Systems International partners firms with sound engineering capabilities to design, construct and install a solution to applications outside the design scope of conventional conveyors.

The ICS belt system is simple to install, has a small footprint and is able to convey at steep angles (up to 80°). It can also negotiate tight radius vertical and horizontal curves, eliminating the need for transfer points. The enclosed belt prevents any dust, product loss or carry-back spillage.

For more information about the ICS belt system technology call us on +61 8 9353 2400 or visit our website today.
