

Flexible Conveying Solutions!

A conveying path restricted only by your imagination.

Introducing the next generation of bulk conveying technology that is truly flexible! Australian owned and operated, Innovative Conveying Systems International (ICS) designs and manufactures an enclosed belt conveying system for distribution in Australia and overseas to meet global conveying demands.

The patented Innovative Conveying System (ICS) is a flexible conveying system able to convey at up to 80° as well as negotiate tight radius vertical and horizontal curves, eliminating the need for transfer points. The enclosed self-cleaning belt prevents any dust, product loss or carry-back spillage. With a wide variety of fixed or mobile options, the ICS can be adapted to suit a vast array of material handling challenges, from the relatively simple to the highly complex.

For more information about the ICS technology call us on 08 9353 2400 or visit our website today.
